Role
Senior Backend Engineer

Who we are
Outdoorsy.com is an Austin, Texas based company which launched the first international peer-to-peer Recreational Vehicle rental platform. Private RV owners can list their RV’s for rent on Outdoorsy. Our platform handles availability scheduling, payment processing, communication, insurance, GPS tracking and roadside assistance all built in. Our rapidly growing user base has taken us from the United States to Canada, Australia and New Zealand. Our engineering team is a small group of self-starting developers who are motivated by making an impact on the lives of our users, both financially for our owners or experientially for our renters.

Who you are
A hands on senior backend developer that has built and refactored code bases to follow best practices. You’re a stickler for proper architecture and you’re not afraid to voice your opinion if something isn’t designed properly. Comprehensive test coverage is a must for any code. Security, stability and scale are always top of mind when building new functionality or reviewing pull requests from the team.

Stack
- Golang (Google Go)
- Postgres
- Elastic Search
- RabbitMQ
- Redis
- CircleCI
- Heroku
- Java (Bonus)
